# **POLITICAL AND ECONOMIC CHARACTERISTICS OF ISLAMIC BANKING SYSTEM - CORPORATE ANALYSIS**

## **SUMMARY**

The Islamic banking system which derives its ideological foundations from the basic sources of Islam and from the Islamic Sharia is a major pillar of the Islamic state in the field of economy. The last twenty years, Islamic banks recorded high rates of growth of assets, incomes and users by expanding its operations to countries where Muslims are a religious minority.

In order to provide a good analysis and scientific explanations of the Islamic banking system, which is a key subject of this dissertation, the work begins from the political and social dimensions of Islam and from defining a position and role of the economic system in Islam. The case studies of this work are also theoretical basis, ideological foundations and the role of the Shariah Board, as well as the relations of the Islamic economic doctrine toward inflation, indexation, interest rates and commercial activities.

Bearing in mind that, based on the past banking practices in Pakistan, Sudan and Iran, where the model of Islamic banking was a strategic national orientation, all current processes and trends are being reflected in the most efficient way. Therefore, the subject of this analysis will be financial and political systems of these countries, with a special emphasis on the analysis of the regulatory frameworks, market segmentation and business practices of Islamic banks.

In the part of this work dedicated to the Malaysian financial system, the empirical research will be conducted with the analysis of the sustainability of the concept of solidary sharing of profits and losses in practice. The fact that the concept of interest rates in Islamic economy was never really abandoned contributed the most in the process of proving the author's claim of the increasing gap between the theoretical model and the contemporary practice of Islamic banks in the financial systems which are officially sharia. And this is one of the main objectives of this dissertation.

Empirical research that will support this claim will be carried out on samples of average interest and profit rates on quarterly, semiannual and annual term deposits from conventional and Islamic segments of the Malaysian banking market. Testing the statistical hypotheses about the statistical significance of differences in the mean values, using statistical methods ANOVA and calculating the measure of common variations and the degree of cohesion in their movement will create the necessary conditions for making the conclusions on practical sustainability of the concept of solidary sharing of profits and losses, on which the Islamic banking is the based.

The direct rivalry between conventional and Islamic banks will be analyzed in the example of banking market of the Gulf Cooperation Council (GCC). This is also the largest banking market on which they both operate simultaneously. Empirical proof of the hypothesis of the dissertation, according to which Islamic banking is, due to the lower financial resources and insufficiently diversified offer less effective in managing costs and making profits than European banking, will be conducted on a sample of thirty banks (fifteen of Islamic and conventional) operating in the GCC. Comparative analysis of the profitability of banks from Islamic and conventional banking segment will be carried out by testing the statistical hypothesis throughout testing the statistical significance of differences in mean values of return on equity and assets rates, followed by the cost ratios.

Detailed analysis of the theoretical framework and business practices of Islamic banks will serve testing and eventual proving the authors claim that the Islamic banking, in spite of significant specifics, is a derivate of the European banking or conventional system, which is the main *aim* of the dissertation.

**Keywords:** Islam, Sharia, Koran, Sunnah, Islamic banking, the central bank, the Shariah Board, sukuk.

**Scientific field:** Political science

**Special topics:** Political economy
